

within a single study session or across many different sessions. Retrieval practice involves bringing information to mind, which strengthens and reorganizes memorphese two strategies can be combined to maximize longerm retention.

Using effective strategies is one way to utilize working memory more efficiently, but unfortunately, there are many external factors that can take up space in working metagrammetric test anxiety).he impact of external factors on working memory can be temporarily reduced threm writing. When individuals offload their thoughts through writing, they open up working memory space allowing for those resources to be used for retrieval, problem solving, and critical thinking.

This CEDAR Conclusion! was developed by Cindy Nebel, PhD, Aric W. Hamiltonk Betimen Dzara, PhD, MMSc, as a durable education esource for our CEDAR Community.
